Summary

Lead AI Engineer at Coforge with nearly two years of progressive experience — advancing from Data Scientist to Senior AI Engineer to Lead AI Engineer — building and delivering enterprise-grade GenAI, multi-agent, and LLM orchestration systems across Banking, Aviation, and Financial Services domains. I architect and deliver complex AI systems at production scale: from a 25-agent SDLC automation fleet on LangGraph, Azure OpenAI, and a 13-server MCP infrastructure (with 7-year WORM audit retention) for a major US financial institution, to a full-stack AI hiring platform achieving 90%+ selection relevance using real-time biometric proctoring, Azure Speech-to-Text, and GPT-4o evaluation pipelines. My work spans the full agentic AI stack — context assembly, retrieval over Azure AI Search and Neo4j with ACL pre-filtering, Policy Decision Point design, OpenTelemetry GenAI telemetry, and cross-workstream contract governance to prevent production drift. As a published researcher, I was awarded the Miltos Petridis Memorial Trophy — the best student paper prize at the SGAI International Conference on Artificial Intelligence 2025, organised by the British Computer Society — for pioneering a novel geometric surrogate model for aerodynamic car drag coefficient prediction from 3D point clouds. The model achieves state-of-the-art accuracy (MAE = 0.0061, $R^2 = 0.9525$) and reduces CFD simulation analysis time from hours to seconds in early vehicle design phases. Beyond my core AI specialisation, I bring full-stack delivery capability (Next.js, FastAPI, PostgreSQL), data platform modernisation experience (AI-driven ETL migration from Informatica and Greenplum to Databricks — 60% reduction in manual rewrite effort across 940+ workflows), and ML engineering depth across XGBoost time-series forecasting, GAN-based image processing, and dual-LLM document extraction with HITL/RLHF feedback loops. I hold a B.Tech in Computer Science & Engineering (Minor: Machine Learning) from Delhi Technological

University, and ranked AIR 764 among 50,000+ candidates in GATE DA 2025 (Data Science & AI). Prior to Coforge, I interned at Samsung Research Institute Bangalore, where I designed a FIDO2-compliant passkey authentication system and optimised Android 14 database architecture. I am motivated by complex, enterprise-scale AI challenges and actively seeking Lead AI Engineer, GenAI Architect, or Senior AI Engineer roles with organisations at the forefront of AI-driven transformation — particularly in agentic AI, LLM orchestration, and enterprise GenAI platform development.

Experience

Coforge

2 years 1 month

Lead AI Engineer

January 2026 - Present (7 months)

Greater Noida, India

Leading enterprise GenAI and multi-agent AI delivery for financial services modernisation.

Co-owning architecture and delivery of a 25-agent SDLC automation platform for a major US financial institution — built on LangGraph, Azure OpenAI, a 13-server MCP infrastructure, Azure AI Search, and Neo4j, with finance-grade compliance and 7-year WORM audit retention. Owning Input Validation, Context Assembly, and Governance / Security / Observability workstreams, including typed context orchestration, cross-workstream contracts, and OpenTelemetry GenAI telemetry standards.

In parallel, led full-stack delivery of HiringLens AI — an end-to-end L1 interview automation platform (Next.js, FastAPI, GPT-4o) with real-time Socket.IO orchestration, live Azure Speech-to-Text transcription, biometric proctoring, and structured LLM-based candidate evaluation achieving 90%+ selection relevance.

Senior AI Engineer

October 2025 - January 2026 (4 months)

Greater Noida, India

Led AI-powered modernisation of legacy ETL ecosystems from Informatica and Greenplum to Databricks at enterprise scale.

Built a deterministic XML parsing and graph-based dependency engine across 940+ Informatica workflows, extracting end-to-end table lineage and structuring a multi-layer, sprint-wise migration strategy for safe, lossless sequencing. Developed AI-driven SQL dialect translation and schema inference modules that auto-converted legacy transformations into PySpark-native Databricks notebooks — reducing manual rewrite effort by 60% and significantly accelerating delivery.

Data Scientist

July 2024 - October 2025 (1 year 4 months)

Greater Noida, India

Designed and shipped production ML and LLM systems across Banking and Aviation Logistics domains.

Built an XGBoost-based time-series forecasting model on 8 years of banking inflow data — predicting 2–3 month demand horizons using rolling 6-month windows — paired with Bayesian optimisation to dynamically adjust savings interest rates.

Developed a dual-LLM document extraction pipeline combining Azure Document Intelligence (OCR / layout analysis) with GPT-4 (semantic field extraction and normalisation) for aviation airway bills, with a human-in-the-loop (HITL / RLHF) feedback mechanism that continuously refined accuracy through structured operator corrections.

Samsung R&D Institute India

Research Intern

June 2023 - August 2023 (3 months)

Bangalore, India

Built a FIDO2-compliant passkey authentication system aligned with W3C security standards, with a secure Relying Party server in Node.js and WebAuthn enabling passwordless user sign-ins. Constructed REST APIs for WebAuthn credential registration and assertion flows with cross-browser compatibility and security compliance.

Optimised Android 14 metadata and database architecture, achieving a 20% reduction in on-device storage consumption alongside enhanced data security through time-bound access controls.

Education

Delhi Technological University (Formerly DCE)

Bachelor of Technology, Computer Science and Engineering · (August 2020 - May 2024)

Delhi College of Engineering

Bachelor of Technology, Computer Science and Engineering · (August 2020 - May 2024)

St. Xavier School - Delhi

12th, CS · (August 2007 - January 2020)
